Smart Hybrid PBX

KX-NS500 Approach Book

Evolving systems that make your dreams come true.
Concerns that come hand-in-hand with business

We want to minimize initial costs.

We want a future-proof system.

We want a single unit with multi functions.

Smart Hybrid System

Flexibility and Scalability

One Package Solution

Innovate Your Business With One Package Platform

Smart Hybrid PBX KX-NS500
KX-NS500
Superb performance to match your business needs.

Cost saving

Creating new business styles

Technology with a future perspective
Ideal for any office.

The Ideal System Configuration for Your Office

The ability to use your existing phone lines and IP network lets you configure a cost-effective system that meets your needs.

Expand as Your Business Grows

This system will suit a variety of company types, and users can expand it to meet their needs.
Installation costs are reduced by the ability to use existing assets.

**Using Existing Equipment**
Continue using existing devices, such as Proprietary Telephones for the Panasonic PBX just as they are.

**Using Existing Outside Line**
There is no need for new contracts, because you can use your existing outside line as is.
Shifting Business from the Office to the Field.

» Panasonic Wireless Systems
Panasonic’s wireless phones include compact and tough types, so they can be used just about anywhere in the office. Our unique technology enables comfortable conversations even in noisy places.

» Bring Your Own Device (BYOD)
You can use your own mobile phone (including software phones installed in smartphones) as a company extension. And a mobile phone can be paired with your desk phone as one numbered extension.

» Conferences
Voice conferences with up to 32 members are possible using your desk phone, cellular phone, or software phone.
Messaging

Reliable response even while you're away.

» Unified Messages
Incoming calls can be received by a unified message during your absence. Voice messages that are left can be e-mailed to a PC or smartphone.

» Voice Recording
You can also record conversations. Up to 24 simultaneous calls with a maximum of 400 hours of conversation can be recorded.

» Recording Back-up
Back up voice data to USB memory or an external server (NAS*).

* NAS: Network Attached Storage.
Improvements can be continuously made.

» Automatic Voice Guidance for Customers

Voice guidance is available for callers. Announcement of expected waiting time is also available. Callers can leave a voice message when they do not want to wait.

» Automatic Recording for Supervisors

Conversations with customers can be automatically recorded. The supervisor can search for recording files and listen to the voice recording by logging-in to the PBX built-in web server.

» ACD Report (Call Status Monitor)

The supervisor can monitor the live status of the Call Centre by logging-in to the PBX built-in web server. Call Centre reports are also available.
Providing optimal communication.

**Desktop Communication**

The status of employees can be checked from a PC, so you can use the most suitable and easiest contact method, such as telephone (land line or mobile), chat, or e-mail. You can also use CRM database integration.

**Anywhere Communication**

See the presence of co-workers in remote rooms or branches from a smartphone,* just as you do with a PC.

**Video Communication**

Video communication can also be used for more detailed conversations by viewing facial expressions.

* Supported by Version 2 or later.
Technology with a future perspective

Office Communication Links and Expands Capabilities.

» Expanding Extensions
Adding the Panasonic KX-NS1000 further expands the system capacity at low cost, providing the use of up to 1,000 extensions. What's more, you can continue to use your existing phones and other equipment.

» Multi Site Connection with the KX-NS Series
Connection of KX-NS1000 and KX-NS500 sites allows the use of up to 1,000 extensions, and all sites can be managed by a single KX-NS1000 (one-look networking).

» Expansion to More than 1,000 Extensions
By connecting sites using conventional methods without one-look networking, it is possible to use more than 1,000 extensions.
Easy to set-up, ready to use.

- **No special costs or labour required**
  You don’t need any special tools, because settings are made by Panasonic devices or PCs based on web maintenance.

- **Easy enough for anyone to set up**
  You can make settings with the same easy operation as previous models, so setup is quick and easy.

**Simplified Maintenance**
Panasonic provides you with the ideal workstyle.

» KX-NT Series
   IP proprietary terminal

» KX-DT Series
   DIGITAL proprietary terminal

» KX-UT Series
