◆ Document Output Control

<Function>
The document output speed is controlled right before each document is output, reducing document output variance.
When output paper does not align, the function is effective.

<ICP Setting Procedures>

1. Click “Scan” at the left side. The “New Document – Scan” dialog box is displayed.
2. Click “Scan Setting”.
3. Select “Feed” tab.
4. Check “Alignment” Mode
5. Click “OK”
6. Click the “Start” button to begin scanning.

<Notes>
• This function cannot be used with some scanners.
• When the paper path selector of the scanner is set to the straight path (rear exit), the output speed of the documents will not be controlled.
