

◆ Zone OCR

<Function>

When you use the OCR Zone function, text will be recognized while scanning and acquired as an OCR result that is used in the file name and Output Log.

The Output Log is available only in Job Scan mode.

【OCR-1】

【OCR-2】

【OCR-3】

Simple Scan

File name: 308211-1, 308212-2, 308213-3 ([OCR]-x)

<ICP Setting Procedures>

Simple scan – OCR Zone setting procedure

Refer to

1. Select a document name that includes "OCR" in "Prefix" in the "Simple Scan" tab of "Application Setting". (select "OCR-" this time)
2. Click "Scan"  at the left side. The "New Document – Scan" dialog box is displayed.
3. Select "OCR Zone" – "Config" in the "New Document – Scan" dialog box.
Select "OCR Target Language" and set one sheet of the document on the tray and click "PreScan".
Click  and specify the Detection Area using a red rectangle in "Preview" and its values are changed.
Click "PreOCR" and the result is displayed in "OCR Results".
Click "OK".
4. Click "Start" to begin scanning. The scanned images will be displayed.
5. Select "Edit" – "OCR Zone Confirmation" and confirm the OCR results.
6. Output the document as Single Page and each OCR Zone text is used for their file name.
(If it is output as Multiple Page, the OCR Zone text of the first page is used for its file name.)
