

TELECONFERENCE+

In touch anywhere with everybody!

Wireless flexibility and smart call management! For team discussions from your desk or setting up a teleconference in a meeting room in an instant, Panasonic has your IP Wireless Deskphone solution.

KX-TPA68

The Stylish and Flexible IP Wireless Desk Phone

- Wireless DECT for comfortable desktop operation. No LAN cable installation. Just access to a power outlet.
- Speakerphone with loud and clear Panasonic audio quality.
- Large 3.5-inch colour LCD for an at-a-glance view of all information.
- Key System Feature for team call management.

Case Study: TELECONFERENCE+

In touch anywhere with everybody!

For this medical marketing research startup, their three small low-cost office units and a shared server are ideal. Staff also frequently used a shared conference room for team calls to clients. But bringing the PC to the conference room and setting up the voice chat application was a hassle, and the poor audio quality and the unstable signal from the wireless router in the server room was frustrating. They needed a wireless solution for conference calls as flexible and cost-effective as their shared office space.

Panasonic and their carrier partner proposed the ideal solution plus more. With Panasonic's single-cell KX-TGP700 DECT base unit installed in the server room, easy-to-install repeaters, and KX-TPA68 wireless deskphones in each office, their wireless system was set up in no time for full office and conference room coverage. In addition to superb signal stability and clarity, the portability of the KX-TPA68 deskphone enabled quick setup of teleconferences in the conference room. Just unplug KX-TPA68, carry it from the desktop into the conference room, plug into a power outlet and call! On the desk, communication with colleagues and clients has also been improved by easy teleconferencing, and by functions like the Key System Feature for at-a-glance line monitoring and call handling.

Delivering top-in-class audio clarity, TELECONFERENCE+ leverages the flexibility and freedom of Panasonic's DECT wireless phone system to add the dimension of portability to teleconferencing.

Panasonic Sets Your Business Free

Today's workplace is changing. Mobility, workstyle renovation, and diversification demand flexible cloud-based mobile solutions. Pioneering Panasonic DECT and IP technologies are helping you cut the cord and getting your business on the move. When Panasonic introduced the KX-TGP600 Single-Cell DECT system with 8 simultaneous call capacity, it opened the eyes of business to the vast potential of IP wireless DECT technology and ignited a revolution in workplace communications. Supported by a wide lineup of mobile and desk-type DECT terminals, this solution anticipated the demand for greater mobility in the workplace and the needs of diverse workstyles. Now this same DNA has sparked another evolutionary leap: new high-performance terminals with enhanced functionality and improved ergonomics and the ground-breaking KX-TGP700 system with "16 handset x 16 line x 16 simultaneous call" capacity. With Panasonic, designing an IP wireless DECT system to precisely fit your needs now and in the future has never been easier.

Reduced hardware costs and the simplicity of the Panasonic IP wireless DECT system are the just beginning of the advantages. Getting started only requires an internet connection, power connection, and service through a Panasonic SIP Carrier Partner. After the swift installation without costly cable laying, functions like the Key System Feature check line status and prevent lost calls and business opportunities. Impact your bottom line with lower operation costs and energize your workplace with the power of Panasonic IP wireless DECT mobility.

Free your business and put your potential in motion with Panasonic IP wireless DECT.

*Distance varies depending on the environment.

Business phones for people who know the value of audio quality in communication.

Teleconferencing is indispensable to the modern business. Whether with clients or an internal team meeting, the power to conference easily, clearly and without annoying signal loss or latency can multiply productivity and customer satisfaction. For a plug-and-play IP deskphone with the flexibility and functionality of pioneering DECT technology without costly cable installation, Panasonic has the solution.
