- 200 hours standby time/10 hours talk time* for a full work day and more.
- Noise reduction and superior Panasonic audio quality even in a noisy workplace environment.

* Wideband with LCD backlight off and Bluetooth not in use.

Case Study: SLIM+ In touch and on the go!

Since opening this bustling pizza parlor, the owner-chef has been working the oven around the clock. His small staff are doing double- and triple-duty. From seating customers and clearing tables to manning the register, staff are constantly in motion. The popular delivery service also means handling phone-in orders. With business booming, the owner must upgrade his phone system, but he wants his employees equipped with the right handset – easy-to-carry and easy-to-operate with high quality audio for the noisy environment.

Panasonic and their carrier partner have the ideal slim solution plus more. Fully compatible with Panasonic's quick-to-set up and easy-to-maintain single-cell DECT base station, the UDT121 IP wireless handset is not only a light 88g, but also has a slim ergonomic form that smoothly slips into pants pocket or clips onto a belt. Staff can take call-in orders on the move. No time wasted rushing to answer a deskphone at the cash register to take delivery orders and record reservations. Bluetooth headset compatibility leaves hands free to jot down notes while taking orders. The quick charging handset is small, but it holds enough battery capacity to last till the last order of the day.

Panasonic's pioneering DECT wireless phone technology answers the needs of every business with world-class solutions boasting audio call clarity and IP wireless performance in an affordable system. For mobility without burdensome bulkiness, SLIM+ is the IP wireless handset that your business has been looking for.

Panasonic Sets Your Business Free

Today's workplace is changing. Mobility, workstyle renovation, and diversification demand flexible cloud-based mobile solutions. Pioneering Panasonic DECT and IP technologies are helping you cut the cord and getting your business on the move. When Panasonic introduced the KX-TGP600 Single-Cell DECT system with 8 simultaneous call capacity, it opened the eyes of business to the vast potential of IP wireless DECT technology and ignited a revolution in workplace communications. Supported by a wide lineup of mobile and desk-type DECT terminals, this solution anticipated the demand for greater mobility in the workplace and the needs of diverse workstyles. Now this same DNA has sparked another evolutionary leap: new high-performance terminals with enhanced functionality and improved ergonomics and the ground-breaking KX-TGP700 system with "16 handset x 16 line x 16 simultaneous call" capacity. With Panasonic, designing an IP wireless DECT system to precisely fit your needs now and in the future has never been easier.

Reduced hardware costs and the simplicity of the Panasonic IP wireless DECT system are the just beginning of the advantages. Getting started only requires an internet connection, power connection, and service through a Panasonic SIP Carrier Partner. After the swift installation without costly cable laying, functions like the Key System Feature check line status and prevent lost calls and business opportunities. Impact your bottom line with lower operation costs and energize your workplace with the power of Panasonic IP wireless DECT mobility.

Free your business and put your potential in motion with Panasonic IP wireless DECT.

*Distance varies depending on the environment.

Business phones for a slim, active workstyle.

In workplaces like restaurants or supermarket, staff need to be mobile – never burdened by a bulky handset. High audio quality with noise reduction for clear voice communications is a must, and Bluetooth hands free calling is a big plus! For an IP wireless handset that is easy to slip into a jacket or jeans pocket or clip to your belt, Panasonic has the slim solution.
