

Central Management Controller improves your business

Notice functions

Do not miss your business chance and will more ensure reliability from your customers with various proactive functions.

Gathering Multi-Function Printer (MFP) counter information

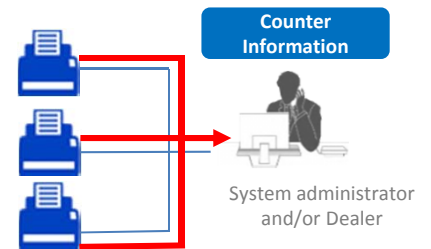

You can gather counter information of the MFPs installed in the customer periodically. You can check/keep track of the usage of the MFPs for monthly bill without visiting to the customer site. Additionally, you can propose replacement to a new MFP when a machine goes beyond the product life.

Notice of Toner and Drum replacement time

When the replacement of consumables is required, Central Management Controller will send out an e-mail to you*. Before consumables runs out, you are able to deliver the replacement to the customer.

E-mail Error notification with error code

If some trouble occurs on a MFP, you can receive an error notice by e-mail. Without asking error details to the customer, you can offer a quick repair service to the customers.

*Advance registration for where to send is required.

Collective software update function

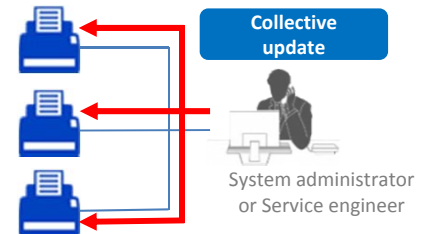

Enables you to reduce your service time and labor drastically by changing configurations as well as by updating software of multiple devices through a few steps of simple operations

Collective setting

You can copy collectively the software configurations, such as scanning & printing set-ups, on to another PC and the settings of a designated MFP to another MFP as well.

Firmware and PC Driver Upgrading

You can upgrade connected MFP's firmware and PC driver installed effectively without visiting to the installation site for each. It also enables client PC users to install a server stored software if required.

Management and monitoring function

Eases your burden for device maintenance by centralizing software management as well as by monitoring multiple MFPs.

Centralized management

The system administrator will be able to manage multiple MFPs over the network with the centralized control.

Real-time management

The System administrator are able to check in real time whether errors or warnings come out and monitor the operating status of the MFP remotely as well.

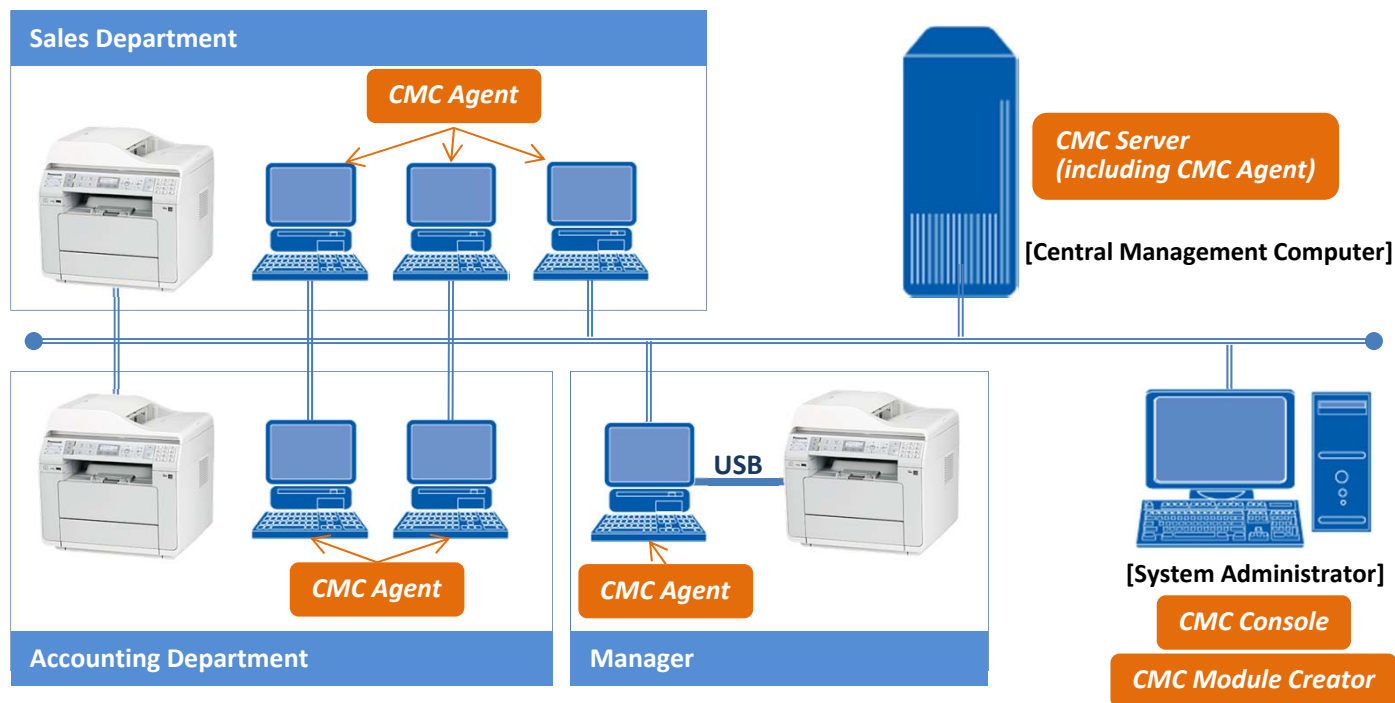

Management more easily

It makes it easier to manage by setting information such as the groups on each MFP.
